                                                                                    The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABS$501-ABS$5005 represent human liver single exon nucleic acid probes of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                            21-SEP-2000;

```
CC the genes listed in the specification, where differential expression of CC the genes is indicative of at least one toxic effect or progression. CC The method can also be used to identify an agent which modulates the CC toxic response and predict cellular pathways that a compound modulates (CC in a cell. The methods utilise a set of at least two probes (on a solid CC support in kit form), where each of the probes comprises a sequence that CC system comprising a database containing information identifying the CC expression level in a tissue or cell sample exposed to a hepatotoxin of a CC identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a CC identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a CC identifying the expression level in a tissue or cell for at least one gene CC isted in the specification. The method is useful for elucidating global CC changes in gene expression and for identifying toxicity markers in CC toxicity markers in drug screening and toxicity markers in CC toxicity markers in drug screening and toxicity assays. The genes and CC gene expression information may be used as diagnostic markers for the prediction or identification of the physiological state of tissue or cell considered to a compound or agent. Hepatotoxicity is characterised by centrilobular necrosis and steatosis. The present CC which is differentially expressed in response to a hepatotoxic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

Claim 1; Page 268-269; 585pp; English.

The invention comprises the amino acid and coding sequences of human secretory (SPTM) proteins. The SPTM DNA and amino acid sequences are useful for treating a disease or condition associated with the expression of functional SPTM. The SPTM DNA sequences are useful for somatic or germline gene therapy to correct a genetic deficiency (e.g. severe combined immunodeficiency). The SPTM DNA sequences are also useful in providing protection against intracellular parasites (e.g. fungal parasites and protozoan parasites). The SPTM DNA and protein sequences are also useful for diagnosing cell proliferative disorders, cancer, immune disorders (e.g. AIDS), neurological disorders (e.g. Parkinson's disease), motor neuron disorders, demyelinating diseases (e.g. multiple colarons). sclerosis), meningitis, abscesses, prion diseases, peripheral nervous system cerebral palsy,

                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB
